

MODUL-X 111

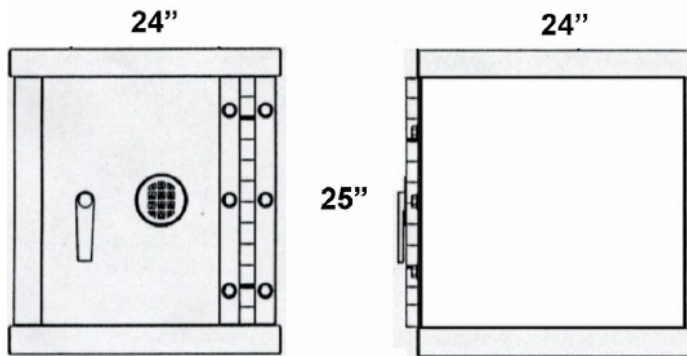

This full six-sided high security composite safe is available in our modular, bolt-together configuration.

Why is CitySafe, Inc. different from all the other safe builders? Because they are the only manufacturer of high-security modular safes, and are an Underwriters Laboratories inspected, tested, and approved builder of safes. Their Modul-X safe is UL rated TL-30x6 and has received insurance coverage of up to \$750,000.

Modul-X 111 is a 88mm (3.5") thick safe, one of the strongest safes made in the U.S.

Why compromise? Let us put this High-Security safe in your place of business or residence.

INSIDE DIMENSIONS: 15"H x 17"W x 14"D

MODULAR UPPER-FLOOR OR BASEMENT SAFES

CitySafe, Inc. a builder of commercial high-security safes and vaults, now makes their Modul-X Technology available to Residential Customers.

Are you using a low grade safe because of installation restrictions? Why? CitySafe, Inc. can install a new High-Security safe and assemble it on site, and in place. No damage to stairs, floors, or walls. No hassles.

According to FBI statistics, a residence is 3X more likely to be burglarized than fall victim to fire. Don't rely on a cheap fire safe to keep your possessions out of the hands of criminals. Modul-X safes offer an extremely high level of burglary protection while providing insulation from the heat of a fire. There is no excuse not to have a high-security safe where you need it.
